

Welcome to gforge.ictp.it

A forge gives the ICTP people tools that promote good practices for collaborative work and that help in the dissemination of their work (inside and out of the laboratory). **It permits an evolving collaboration around a project.** Thanks to its associated public and private project spaces, the working environment evolves and adapts as the project does. It's a resource to help the eLab project and people in their work and its visibility.

RegCM-4.1 released !

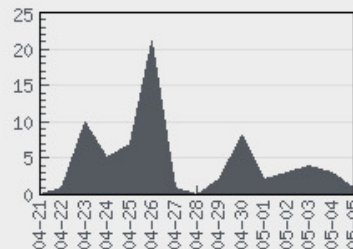

Posted on 2011-05-18 by cozzini

We are proud to say that RegCM-4.1 version has been released.

RegCM4.1 has the following upgrades:

- Tropical band option officially enabled and documented
- General bug fixing/cleaning in preprocessing/main model/postprocessing
- Lake Model working again
